

VECTIS

CYLINDER-FREE
Multi Point Locking

from

The Door Lock People

No euro cylinder, so...

- No bumping
- No breaking/snapping
- No plug extraction

The Door Lock People

Patented Product

CYLINDER-FREE Multi Point Locking

The Multi Point Locking market is a highly competitive market place with many 'similar' products; product differential is vital.

ERA has developed the next generation in Multi Point Locking; VECTIS - the Cylinder free Multi Point Lock.

The patented Vectis encompasses ERA's traditional lever technology used in mortice locks for centuries; combined with today's need for modern locking systems.

The Vectis is designed to meet the requirements of PAS 23/24 & Secured by Design.

Benefits of Vectis:

- Patented 5 Lever operation eliminates the need for euro cylinder operation. No euro cylinder means the Vectis is free from cylinder manipulation, snapping and plug extraction
- Door fabrication is made easier and quicker for the installer
- All current ERA Multi-point locking variants can utilize the Vectis gearbox, signifying no routing amendments needed
- Vectis can be keyed alike to ERA's mortice lock range; allowing a Multi point lock on the front door and a mortice lock on the back door both using the same key
- No need for the distributor to purchase or stock various euro cylinder variants

Product Specification:

- Vectis is available in the following backsets:
 - 35mm Backset – with centre hook and deadbolt option
 - 35mm Slave unit
 - 45mm Backset – with deadbolt option only
- All gearboxes are supplied with 3 x brass keys
- Choice of handle solutions available:
 - Universal insert
 - Integrated complete handle
- Internal thumb turn adaptor
